## Dalo Consulting Inc.

- About Me:
  - Performed specialized services at more than 55 Progress customer sites:
    - Progress Database Administration
    - Install/Upgrades/Migrations of Progress and QAD Applications
    - Technical Audits / Performance Tuning
    - Business Continuity Strategies
  - Key Member in large Progress and QAD implementation

CONSULTING INC.

## Before We Start...

- Your Mileage May Vary
  - Information in this presentation may not necessarily apply to your environment
  - Don't hesitate to verify your best practices with your favorite DBA
  - The recommendations are general and apply mostly to OpenEdge 10+ environments

3 © 2013 Dalo Consulting Inc. Obsolete DBA Best Practices

**DALO**  
CONSULTING INC.

## Product Life Cycle In Brief

- Active:
  - Fully supported and receive new features and enhancements.
- Mature:
  - Fully supported but do not receive new features;
  - Evaluated for certifications on new operating environments.

# Obsolete DBA Best Practices

**Product Life Cycle In Brief** 

- **Retired:**
  - Not available for sale, only for adding user counts to existing licenses;
  - Not evaluated for certifications on new operating environments;
  - No Service Packs, nor Hot Fixes
  - Progress strongly recommends that customers migrate or upgrade to fully-supported Progress products as soon as possible in order to maintain the highest level of support for their applications and systems.

Reference: [http://communities.progress.com/pcom/docs/DOC-32338\\_09/16/2012](http://communities.progress.com/pcom/docs/DOC-32338_09/16/2012)  
7 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**Obsolete Practices** 

- **Common Reasons**
  - *If it ain't broke why fix it?*
    - Reduced Performance
    - Longer to maintain than required
    - Unnecessary downtime
  - Version or system does not support the new method
  - New functionalities are not known
  - The practices have not been revisited since the upgrade

10 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**QUESTION** 

Which of the following items below can still be useful?

8 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**Agenda** 

- Introduction
- **Improve Performance**
- Save Time
- Reduce Downtime
- Other Interesting Tricks
- Questions

11 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**ANSWER** 

All of the items below are considered obsolete but can still be used for one reason or another.

9 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**Obsolete Practice** 

- **Regularly Truncating the BI**
  - `proutil <DB> -C truncate bi`

12 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

# Obsolete DBA Best Practices

## Regularly Truncating the BI

**DALO**  
CONSULTING INC.

- **Common Reasons:**
  - Save space on the disk drives or backup tape
  - Avoid an uncontrollable size
  - Prevent data-loss
  - Been doing so for years...

13 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## BI Formatting

**DALO**  
CONSULTING INC.

16 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## BI In Brief

**DALO**  
CONSULTING INC.

- **Every transaction is logged in the BI file;**
- **Ensures database integrity:**
  - Undoes or reverses uncommitted transactions in the event of a failure or crash;
  - Writes buffered transactions that have not yet made it into the DB files;
  - Restores the DB to a consistent state after a failure or crash

14 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Solution

**DALO**  
CONSULTING INC.

- **Avoid truncating the BI**
- **Use BI Grow:**
  - `proutil <DB> -C bigrow <# clusters>`
- **Keep track of BI file growth**
  - Identify the BI's "natural size"
  - Can be tracked using the VST:
    - for each `_AreaStatus` where `_AreaStatus-Areanum = 3:`  
`disp _AreaStatus-Totblocks`
    - Or by the BI file itself if using a variable extent:  
`ls -l qaddb.bi`  
`-rw-r--r-- 1 mfg qad 1148276008 Sep 18 00:17 qaddb.bi`

17 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## BI In Brief (con't)

**DALO**  
CONSULTING INC.

- **The BI consists of clusters**
  - Default 512KB
- **BI space is re-used when it's no longer needed**
- **All transactions freeze when the BI is growing and formatting**

Reference: Progress Kbase #13866 – Undo and Redo Logging: How the BI file works

15 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Valid Truncate Reasons

**DALO**  
CONSULTING INC.

- **Valid Reasons for Truncating:**
  - Reduce the size after an unusual operation.
    - **Example:**
      - Dump/Load
      - After a very largely scoped or old transaction has occurred
  - Access a database in Read-Only mode:

```
Warning: Before-image file of database /reg03/dbs/hlp/r03prd1hlp is not truncated. (1552)
<OK>
```

18 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

# Obsolete DBA Best Practices

## Valid Truncate Reasons

**Valid Reasons for Truncating (con't):**

- When the truncate is followed by the "BIGROW" command;
- Progress automatically truncates during certain operations:
  - Example:**
    - When activating After-Imaging
    - When changing the BI block size or cluster size

19 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## "Schema Area" Storage Area

- Contains Master Block and other DB structure info;
- No flexibility on the records per block, always 32:
  - d* "Schema Area":6,32;1
- No flexibility on the storage area type, always Type 1:
  - d* "Schema Area":6,32;1
- Cannot separate database objects in a logical manner for optimized performance.

22 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Obsolete Practice

- Using your database like a version 8 DB in an OpenEdge installation
  - Using the default "Schema Area"

```
ADD TABLE "Acc_bal"
AREA "Schema Area"
DESCRIPTION "Account Balances"

ADD INDEX "Key" ON "Acc_bal"
AREA "Schema Area"
UNIQUE
PRIMARY
```
  - Using Type 1 Storage Areas:
    - d* "TRANSACTION":7,64;1
    - d* "TRHIST":25,64;1

20 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Type 2 Storage Areas

- Identified by a number other than "1" which follows the records per block setting, which specifies the blocks per cluster:
  - d* "TRANSACTION":7,128;512
  - d* "STATIC":9,64;8
- Allows us to store database objects in clusters;
- Reduces scatter as blocks are contiguous and belong to the same object;
- Type 2 is defined during the creation of the storage area or database.

23 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Storage Areas In Brief

- Storage Areas let us physically define where to store our database objects;
- They let us choose where to place the actual database files;
- We can choose the records per block to better optimize;
- With OpenEdge 10+, we have type 2 storage areas which enables us to store our data in clusters.

21 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Agenda

- Introduction
- Improve Performance
- Save Time
- Reduce Downtime
- Other Interesting Tricks
- Questions

24 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

# Obsolete DBA Best Practices

## AI Replication

**DALO**  
CONSULTING INC.

- Requires complex scripting
- Often requires minor adjustments and manual intervention
- Still requires a Progress license on target server
- The OpenEdge Replication license often costs less than the target server's duplicate set of licenses

31 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Obsolete Practice

**DALO**  
CONSULTING INC.

- Putting too much emphasis on managing fixed extents

- d "TRANSACTION":7,64;8 f 200000
- d "TRANSACTION":7,64;8
- d "TRANSACTION\_IDX":8,64;8 f 20000
- d "TRANSACTION\_IDX":8,64;8 f
- d "STATIC":9,64;8 f 600000
- d "STATIC\_IDX":9,64;8
- d "HISTORY":9,64;8 f 200000
- d "HISTORY\_IDX":9,64;8

34 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## OpenEdge Replication

**DALO**  
CONSULTING INC.

- OpenEdge Replication helps in recovering from a disaster by replicating the Progress databases to another server or site
- The target database can be used for reporting
- Low latency

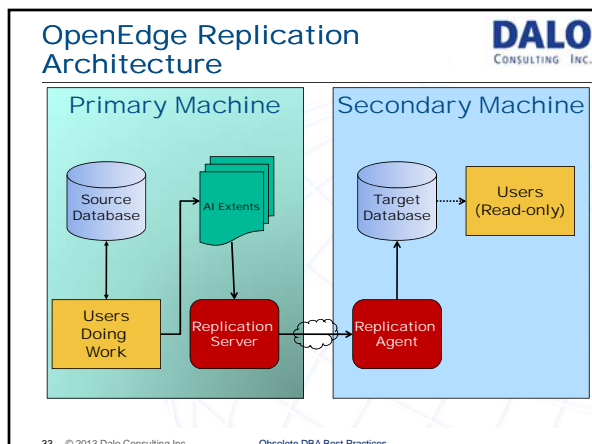

32 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Fixed Extents

**DALO**  
CONSULTING INC.

- Main Reason:
  - Writing in the variable extent uses more I/O, thus slowing down overall performance
- However...
  - Servers and disk subsystems are much faster than they were 10 years ago, especially the I/O performance
  - The performance penalty for variable extents is often negligible.

35 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

## Fixed Extents

**DALO**  
CONSULTING INC.

- Example for a Mon-Fri, 9/5 shop, growing 1 GB per month:
  - With a 4KB DB and 512 BPC, every extension is 2MB
  - 1GB per month / 2 MB = 500 Database extensions
  - 500 DB extensions / 20 working days = 25 extensions per day
  - 25 extensions per day / 8 hours = 3 extensions per hour

Reference: Paul Koufalis

36 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**DALO**  
CONSULTING INC.

## Fixed Extents

- **Conclusion: Every 20 minutes, your users may have to wait a few milliseconds for your DB to grow 2 MB**

37 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**DALO**  
CONSULTING INC.

## 2GB Fixed Extents

- **Requires more file handles/descriptors**
- **Difficult and longer to manage**
- **The database will crash (or stall with –bistall) once any file reaches 2 GB**

40 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**DALO**  
CONSULTING INC.

## Obsolete Practice

- **Maintaining DB extents less than 2GB:**

## Enable Large Files

- **To Enable:**
  - `proutil <DB> -C EnableLargeFiles`
  - While the DB is down
- **Available since Progress 9.1C**
- **Large files must also be enabled at the file system level**
- **Increase “ulimit” in UNIX**

## Why Fixed Extents <2GB?

- **There was once a time when hard drives were very large but not so large in capacity:**
- **We did not have the “Large Files” option**
- **Older UNIX version limitations: Triple Inode Indirection**
- **Prevent extents from filling up file system**
- **Crude way of making sure we stay in fixed extents**

# Obsolete DBA Best Practices

**Obsolete Practice** 

- The following operations can be done online, with some limitations:
  - Modify the schema
  - Add/Modify tables, indexes, sequences, etc...
  - Add DB extents and Storage Areas
  - Modify DB startup parameters:
    - Blocks in database buffers (-B)
    - After-image buffers (-aibufs)
    - Before-image buffers (-bibufs)
    - Lock table entries (-L)
    - Shared-memory overflow size (-Mxs)

**Conclusion** 

- What is useful and has been for years, is not necessarily the best practice today
- We can improve performance, save time and avoid downtime by adopting newer methods
- OpenEdge 10+ lets us manage our DB more efficiently.

**Questions?** 

47 © 2013 Dalco Consulting Inc. Obsolete DBA Best Practices

**Other Obsolete Practices** 

- **Truncating the DB log: <DB>.lg**
  - Traditional Method:  
`cat /dev/null > db.lg`
  - New Method:  
`prolog <DB> -online`
- **Avoid protocols that transmit data in clear text:**
  - Telnet, FTP, etc...
  - Passwords and data can be “sniffed” with free tools and utilities that may already be installed on the system
  - Use protocols that encrypt the transmission, such as SSH, SFTP and SCP.
