From Zero to AI: Exposing Legacy Progress OpenEdge Logic with the OpenEdge MCP Server

Cameron David Wright

Customer Solution Architect

2026 PUG North America / PUG EU

The Reality Most Progress OpenEdge Customers Face

Decades of proven Advanced Business Language (ABL) business logic.

Growing demand for APIs, cloud integration and AI.

How do we modernize without rebuilding everything?

What You Will Learn

- What Model Context Protocol (MCP) is
- What OpenEdge MCP Server does
- How to expose existing ABL logic
- AI-assisted development practices

A Better Question

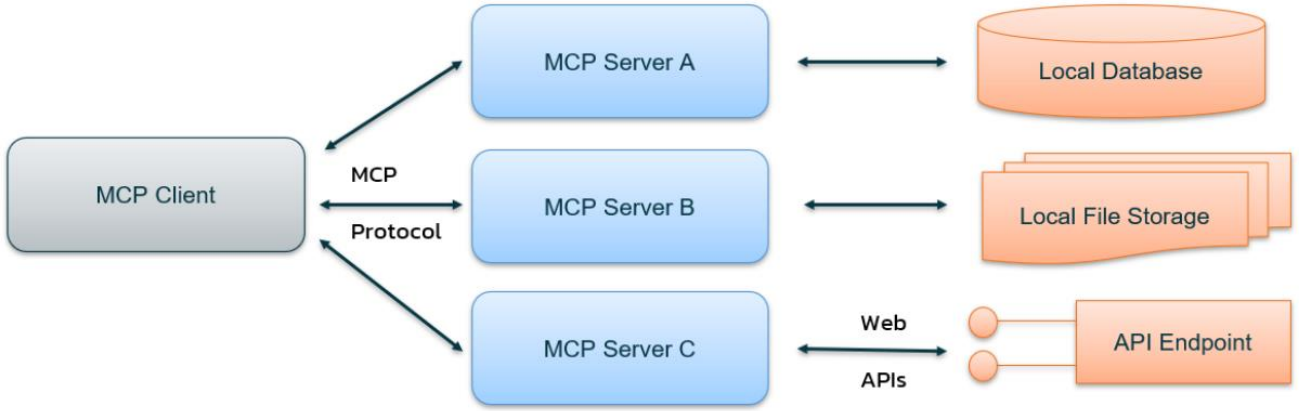

- How do we make the OpenEdge platform accessible to modern systems?

© 2026 Progress Software Corporation and/or its subsidiaries or affiliates. All rights reserved.

What Is MCP?

- MCP is an open-source standard introduced by Anthropic in November 2024 to connect AI applications to external data sources, tools and workflows. Often described as a "USB-C port for AI," it replaces fragmented, custom integrations with a single, universal protocol.

MCP Benefits

- ## Core Technical Benefits
  - **Universal Standard:** Acts like a USB port for AI, allowing any client to plug into any server without custom connectors.
  - **Live Data Retrieval:** Pulls real-time files and database records directly rather than relying on stale preloaded data or heavy RAG re-indexing.
  - **Dynamic Tool Discovery:** Allows AI models to scan and understand available actions at runtime instead of hardcoding functions.
  - **Cleaner Context Windows:** Encapsulates complex API documentation into simple, AI-ready action menus, saving token space and improving accuracy.
- ## Development and Business Advantages
  - **Faster Setup:** Cuts down development time by letting developers reuse a single service's MCP server across multiple AI applications.
  - **Centralized Maintenance:** Requires fixing only the MCP server when updating an underlying API, leaving the AI agent workflows untouched.
  - **Better Security:** Keeps credentials and sensitive logic safely inside the execution layer rather than exposing keys directly to the model.

Starting Point

Sample Source Code

```
def fetch_user_data(user_id):
    """Retrieve user profile information from the database."""

    if not user_id:
        raise ValueError("User ID is required")

    connection = Database.connect()

    try:
        record = connection.query(
            "SELECT id, name, email, created_at FROM users WHERE id = %s",
            (user_id,)
        )

        if record is None:
            return {"error": "User not found"}

        return {
            "id": record.id,
            "name": record.name,
            "email": record.email,
            "created_at": record.created_at
        }
    finally:
        connection.close()
```

execute the ping tool on the mcp server named highload-mcp-server

I'll locate the registered `highload-mcp-server` ping operation and invoke it, then report the response.

Searched for tool usage in the project

The registered catalog ping operation is available; I'm invoking it now.

Ran `catalog_OE_LS_I_CS_GetPingResponse` – highload-mcp-server (MCP Server)

Ping succeeded on `highload-mcp-server`.

Response: `{"_retVal": true, "_hostname": "WINDOWS11BASE", "version": "1.0.0"}`

Curl

```
curl -X 'GET' \
  'http://192.168.4.66:7780/loadsuite/web/api/catalog/ping' \
  -H 'accept: application/json'
```

Request URL

```
http://192.168.4.66:7780/loadsuite/web/api/catalog/ping
```

Server response

Code	Details
200	**Response body**

```
{
  "response": {
    "_retVal": true,
    "_hostname": "WINDOWS11BASE",
    "version": "1.0.0"
  }
}
```
