

# ■ The modern OpenEdge developers toolstack

**Mike Fechner, Consultingwerk**

## Mike Fechner

- Director, Lead Modernization Architect and Product Manager, Architect of the SmartComponent Library and WinKit
- Specialized on object-oriented design, software architecture, desktop user interfaces and web technologies
- 34 years of Progress experience (V5 ... OE12)
- Active member of the OpenEdge community
- Frequent speaker at OpenEdge related conferences around the world

## Consultingwerk Software Services Ltd.

- Independent IT consulting organization
- Focusing on **OpenEdge** and **related technology**
- Located in Cologne, Germany, subsidiaries in UK, USA and Romania
- Customers in Europe, North America, Australia and South Africa
- Vendor of developer tools and consulting services
- Specialized in GUI for .NET, Angular, OO, Software Architecture, Application Integration
- Experts in OpenEdge Application Modernization

## Purpose of developer tools

- Increase productivity
- Allow to focus on problem solving
- Simplify routine tasks
- Support quality
- Integrate with each other
- Provide a comfort zone for developers

**An too often underrated developer tool!**

## A powerful Laptop/Desktop is a developer tool too

- Today's developer machines:
- 8 GB RAM absolute minimum, better 32 GB or more (RAM typically best value for money), 64 GB is not too extreme
- Modern CPU, high clock speed, lots of cache
- 2 SSD's
- 2 or more 27 inch or larger screens

Jenkins Vs Code Git  
PDSOE SCM  
Ant SonarQube Sigrid  
ABLUnit

## Reasons for not using modern developer tools

- Lack of knowledge of availability of those tools
- “None of that works with OpenEdge anyway”
- Our code base is so special that only UltraEdit (replace with your favorite editor) can handle this
- Our legacy code base won't benefit from Unit Tests anyway
- We won't use cloud-based tools in our organization because of XYZ
- If I'd be introducing those tools, I'd be the one who must support the colleagues

## Reasons for not using modern developer tools

- Missing DevOp in the team
- No time to learn about those tools
- Lack of Infrastructure
- Cost of tools

## Legacy Editors

- Progress Developer Studio (OpenEdge Architect) was released in 10.1A – nearly 20 years ago
- Still surprised how often we find developers at new customers using
  - Progress Procedure Editor, AppBuilder
  - UltraEdit
  - Notepad++
  - vi, vim, Emacs for writing ABL code
  - ...
- Nothing wrong with those (may be a developer's comfort zone), but modern editors provide sooo much more

# Progress Developer Studio

## Progress Developer Studio

- Based on Eclipse, IBM's Java IDE
- Workspace and Project-based IDE – a workspace and a project are required to edit files
- Tools to edit ABL source code, AppBuilder GUI and GUI for .NET
- Tools to maintain DB, classic OpenEdge tools like Dictionary, Data Admin, Procedure Editor integrated
- Editor with Code-Completion
- Standalone features: Maintaining of REST Adapter resources, GUI for .NET Visual Designer

## Progress Developer Studio

- PDSOE release tied to OpenEdge release and Java version
- Not possible to use 12.8 PDSOE when still on an earlier version of OpenEdge (e.g. 11.7 or 12.2)
- OpenEdge Tooling (scanning ABL source code to support code-completion and other features) problematic in 12.6 – 12.8 (slow and CPU intensive), 12.2 may be a better choice for large code bases, especially large OOABL code bases

# Progress Developer Studio

- Windows only
- Support for GUI and TTY code bases

## Eclipse Plugins

- Progress Developer Studio benefits from the many plugins available for Eclipse, commercial and open-source
- SCM Integration, code checking, log files, JSON Editor, ...
- Plugins downloaded from dedicated update sites, Eclipse market place or (Windows installers)
- Plugins may have dependency on new Eclipse releases or Java versions
- Installing an up-to-date Git client in PDSOE 11.7 can be challenging
- GenAI plugins typically only work with PDSOE 12.8 due to expectation of recent Eclipse release

## OEDT – Commercial Extension for PDSOE

- Swiss army knife that fixes many weaknesses of PDSOE
- Better – and faster - code-completion
- Intelligent builder, basic refactoring
- **Omecra going out of business end of January 2025 – no support for future OpenEdge releases**
- Potentially collateral damage of VS Code and the Riverside Plugin for ABL

## Eclipse settings

- Mix of Workspace, Project and installation settings
- Workspace settings are not to be synced via SCM
- Project settings are synced via SCM

# VS Code

## VS Code – or Visual Studio Code

- It's NOT Visual Studio – thank you Microsoft marketing for the confusion
- Graphical IDE for Windows, Mac, Linux and Web Browsers
- Support for Debugging, Syntax Highlighting, Syntax Checking, Code Refactoring, etc.
- Proprietary but based on open-source variant (MIT License)
- Scales from simple single file editor to full blown project and workspace based IDE

## VS Code – or Visual Studio Code

- “In the Stack Overflow 2023 Developer Survey, Visual Studio Code was ranked the most popular developer environment tool among 86,544 respondents, with **73.71%** reporting that they use it.” – Wikipedia (EN)
- Probably not exclusive usage – but an indication that also Microsoft .NET and Java developers are more and more moving to VS Code
- The Goto Editor for most Web developers

## VS Code – or Visual Studio Code

- Support for various programming languages through extensions and language servers (LSP)
- Lightweight – fast enough to be the everyday text editor for config files etc.
- Scales up to a full-blown integrated developer environment

## Demo

- Short Demo of VS Code in Action
- Other sessions at the Conference do a deep dive
  - Gilles Querret
  - Peter Judge
  - Paulius Kuprevičius

## Remote Editing on Linux

- VS Code is basically a web application running in the Electron shell
- For Windows development backend and frontend in same machine
- Backend is seamlessly launched with the frontend
- However, it is possible to deploy the backend to Linux or a Mac through SSH
- Using VS Code on Windows to edit files on Linux is way cooler than using PUTTY and VI or mpro
- Build and compile done on Linux

# Demo VS Code from Windows to Linux

VS Code interface showing a sidebar menu with options like 'ANT TARGET RUNNER', 'ANT TREE VIEWER', and 'OPENEDGE DOCUMENTATION'. A tooltip 'Open a Remote Window' is visible over the 'Remote Explorer' icon. The bottom status bar shows 'Develop128' and 'Jira: Mike Fechner'.

## VS Code Extensions

- VS Code has a vibrant ~~Plugin~~ extension ecosystem
- Enhancements to the IDE, support for additional languages or file types, code checkers, unit test runner, ...
- VS Code typically updated monthly
- Extension installed via VS Code marketplace or .vsix files (pre-releases or commercial plugins)
- Extension typically automatically updated very frequently
- Riverside extension for OpenEdge supports OpenEdge 11.7, 12.2 and 12.8 with most recent VS Code platform – decouple tooling version from OpenEdge runtime

## VS Code Extension

- ABL Unit Runner
- ANT Target Runner
- Code Spell Checker
- File Templates
- Jenkins Jack
- JIRA and Bitbucket
- ResX Editor
- Various plugins for Swagger support
- Show workspace name in status bar

## VS Code Extensions

- VS Code includes Git client
- VS Code can be installed by a normal user on Windows as a user application
- This makes VS Code a perfect “emergency” graphical Git Client in customer environments

## VS Code settings

- VS Code has a very smart concept of storing settings
- Folder
- Project (which basically is a folder) plus project configuration
- Workspace
- User (can be synchronized with Microsoft Account)
  
- Folder, Project and Workspace settings typically JSON files distributed via SCM
- Recommended Plugins for Projects or Workspaces

That's all looking great –  
but how does that help  
an ABL Developer?

## VS Code and OpenEdge / ABL

- Extension developed by Riverside Software (Gilles Querret)
- Maintainers of PCT and CABL (SonarQube rules for OpenEdge)
- Partly open-source (extension), language server closed source
- Free of charge
- Works with OpenEdge 11.7, 12.2 and 12.8 and probably beyond
- SonarLint/CABL support through additional plugin
- VS Code updates monthly, so never behind with IDE version

[DETAILS](#) [FEATURES](#) [CHANGELOG](#)

## OpenEdge ABL support for Visual Studio Code

This extension provides rich OpenEdge ABL support for Visual Studio Code - [Extension page](#)

### Current Status

This extension is based on the existing Christophe Camicas work, but went through a complete overhaul due to the addition of the Language Server. This extension is actively maintained, so unless you don't want to switch to the new configuration files, you should use this extension.

### Features

- Syntax highlight
- OpenEdge project configuration (propath, database connections, aliases, ...)
- Multi-thread background compiler
- Profiles
- Debugger (legacy and PASOE)
- Code completion

### Requirements

This extension requires at least one OpenEdge installation, with a developer license. The

### Categories

- Programming Languages
- Snippets
- Debuggers
- Formatters

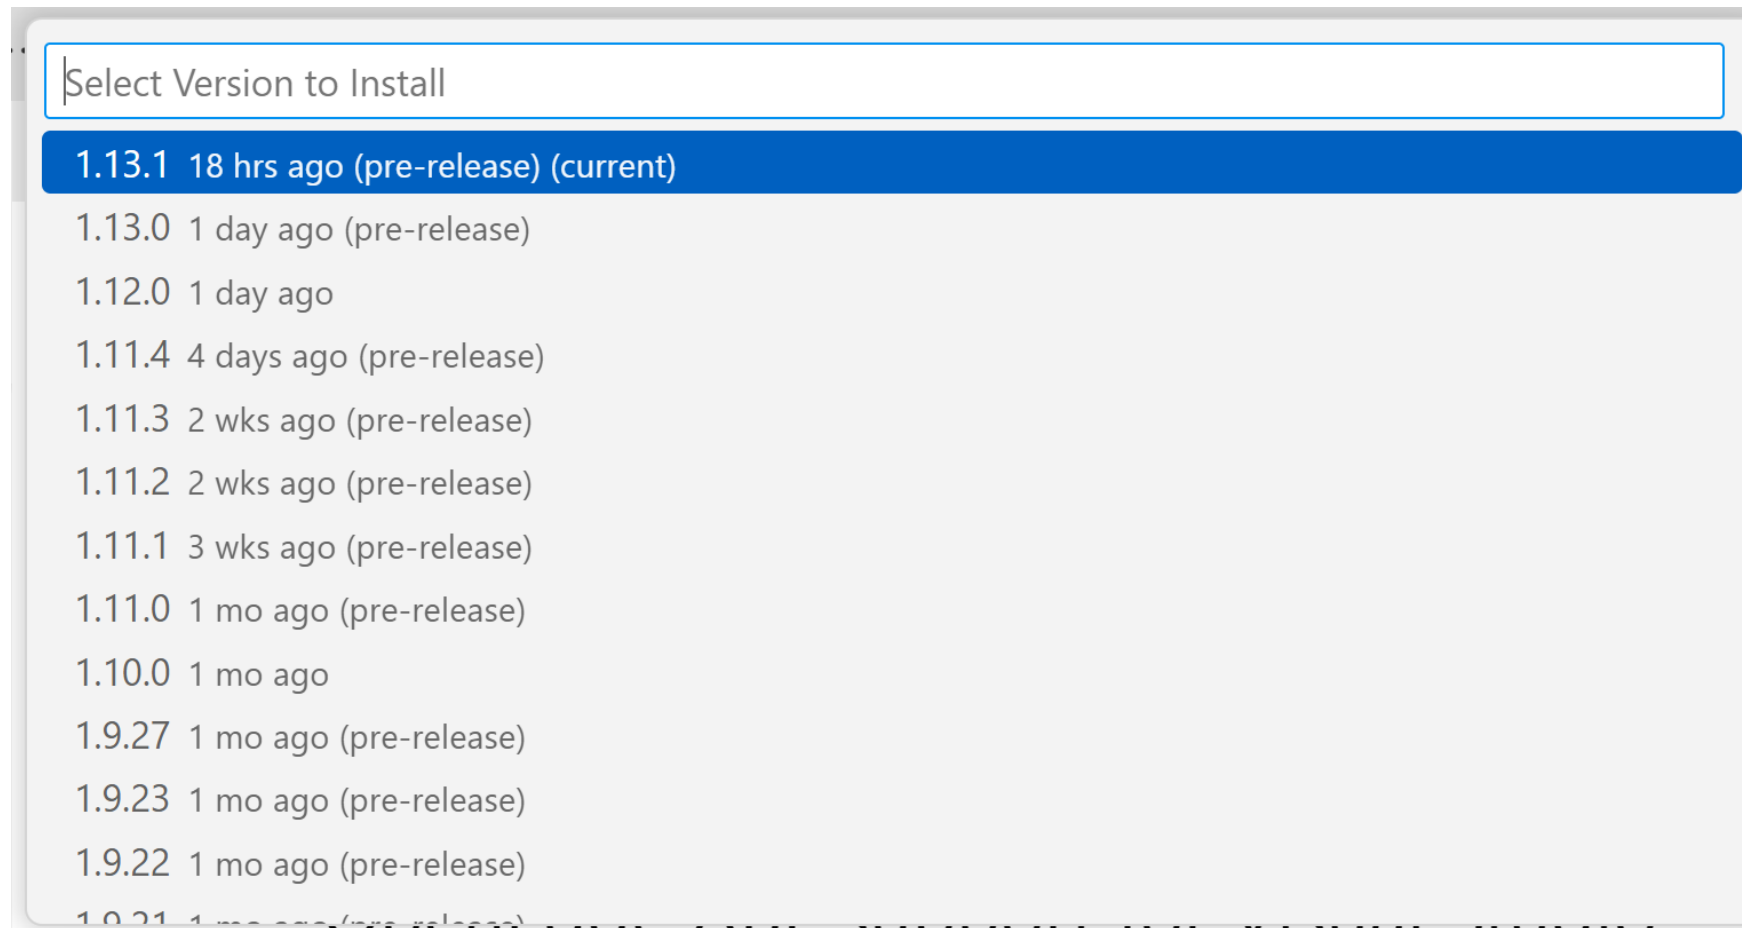

### Resources

- [Marketplace](#)
- [Issues](#)
- [Repository](#)
- [License](#)
- [Riverside Software](#)

### More Info

Published	2022-07-06, 10:07:34
Last released	2024-09-16, 07:46:09
Last updated	2024-09-16, 09:47:58

# ABL Plugin under active development

## VS Code and OpenEdge / ABL

- Editing with rich code-completion (ABL keywords, include files, procedures, classes and methods/properties)
- Compile with prowin (GUI) or \_progress (TTY), compile on Linux
- Fast compilation in multiple threads
- Debugger support (frontend runtime and PASOE)
- Project configuration through JSON file, no property sheets for PROPATH or DB connections
- Profiles to support different configurations, e.g. Progress releases, different Databases during development and test

## VS Code and OpenEdge / ABL

- No integrated UI designers
- AppBuilder can be launched from VS Code project with active file
- Data Dictionary can be launched
- No UI designer integration for GUI for .NET

# Additional Plugins for OpenEdge developers

- ABLUnit Test runner
- ProBro – Database Visualizer
- ProPeek – Profiler Visualizer

## SCM – Tool

- Surprised to see how many developer teams are not yet using an SCM tool
  - Source code in a shared folder
  - Scripts to copy nightly versions to a parallel folder
  - Something homegrown based on an OpenEdge DB and application
- SCM is more than version control or developer/feature isolation
- SCM is key to developer workflows (e.g. code-reviews)
- SCM is central integration hub for developer tools (Build, Test, Deploy, Check)

# SCM Tools

- A tool for everyone
- **Git** – the leader, command line great for breaking fingers, works nice with graphical clients (VS Code, GitKraken, Atlassian SourceTree, ...)
- **Perforce** – the OpenEdge of SCM tools. Rock solid, easy to use, a well-kept secret, the kind of branching and merging
- **MS TFS** – Microsoft has moved everything to Git, do you really want to be the last one standing on TFS
- **SVN**
- **CVS**
- ...

## SCM - Tool

**git**

# There's a Git for everyone

- Atlassian Bitbucket
- GitHub
- GitLab
- Most Linux distributions provide a basic Git server
  
- Bitbucket only cloud-based
- GitHub and GitLab available on-premise as well

# Git Lens – extended Git support in VS Code

Changes added in b4acd5a | 🔍

# SCM provides central code repository

- Hotfixes version releases
- Customization
- OpenEdge release specific changes

## SCM Tool Integration

- Both Progress Developer Studio and VS Code provide integration with various SCM Tools
- Out of the box or via Plugins
- Once plugin is installed, it typically behaves like out of the box
  
- SCM Tool should provide integration with ticket management (e.g. JIRA or GitHub issues) to provide traceability of changes, e.g. has this fix already been released?

# sonarqube

## SonarLint / CABL and SonarQube / SonarLint

- Code Analyzer for ABL
- The SonarQube plugin for ABL developers
- Static code analysis for more or less common coding issues
- Visible in Progress Developer Studio and VS Code “while you type”
- SonarLint Dashboard for central monitoring of quality

641 ...     end method .
```

## SonarLint / CABL and SonarQube / SonarLint

- SonarQube dashboard requires integration into Build process (SCM)
- SonarQube community edition, single branch only
- SonarQube commercial edition with support for feature-branches
  
- CABL rules, commercial product from Riverside

# Unit Testing

## Unit Tests are life savers - a true story

- Last week during testing of OpenEdge 12.8.4
- 5 Unit tests (out of 19.000) failing after upgrade of build server to OpenEdge 12.8.4 – time to notice < 30 minutes
- Probably a bug fix introduced behavior change in READ-XML of ProDataset (confirmed as a “critical” bug now):

*OCTA-61964: "ProDataSet READ-XML and READ-JSON methods cause the ABL session to crash when the XML/JSON document mistakenly contains a record nested inside of itself."*

- Workaround implemented and tested in ~ 4 hours

## ABL Unit provided by Progress Software

- Integrated into Progress Developer Studio
- ANT Tasks for Build Automation
- Integrated into VS Code through ABL Unit Task Runner
- Similar concepts as JUnit, NUnit, ...
  
- SmartUnit for SmartComponent Library customers
  - tests are compatible
  - but additional support for configuration of test environment
  - mocking of application data and services

## Demo

- ABL Unit in Progress Developer Studio

# ABL Unit Test Runner

- <https://marketplace.visualstudio.com/items?itemName=kherring.ablunit-test-runner>

The screenshot shows the Visual Studio Marketplace page for the ABLUnit Test Runner extension. The browser address bar displays the URL: <https://marketplace.visualstudio.com/items?itemName=kherring.ablunit-test-runner>. The page header includes the Visual Studio logo and the word "Marketplace". The breadcrumb navigation shows "Visual Studio Code > Testing > ABLUnit Test Runner". A "Sign in" button is visible in the top right corner. The main content area features a blue background with a large icon of a flask containing bubbles and a green arrow pointing to the right. The extension name "ABLUnit Test Runner" is displayed in white, with a yellow "Preview" badge to its right. Below the name, the author "Ken Herring" is listed, along with "183 installs" and a star rating of "(0)". The description reads "OpenEdge ABLUnit test runner for VSCode". At the bottom, there is a green "Install" button and a link for "Trouble Installing?".

## ABL Unit Test Runner

- Code coverage was indicated „in the source“ by highlighting lines in light green or red
- Known issue – test failures only indicted when test class has 2 or more test methods ...
- Well, you need to test for good *and* bad anyway ;)

## Additional Code & DB checks implemented as Unit tests

- Method comments and parameter comments
- Localizable setting in GUI for .NET (.resx file scanning)
- DB Schema tests
  - Trigger path with forward slash and without src
  - Unique Index
  - No tables/fields/lobs in scheme-area
  - UTF-8 code page for lobs
  - ...
- Executed as specialized test-runners in our of Unit test tool (SmartUnit)

```

32 class Consultingwerk.SmartUnit.SchemaValidation.SchemaValidationTestRunner
93 /**
94  * Purpose: Executes test that CLOB's have a UTF codepage
95  * Notes:
96  */
97 method protected void ExecuteClobCPTest ():
98
99     for each dictdb._field where _Field._Data-Type = "CLOB":U
100         and not _Field._Charset begins "UTF":U
101             no-lock,
102             first dictdb._file where recid (dictdb._file) = dictdb._field._File-recid
103             and dictdb._file._File-Number > 0 and dictdb._file._File-
104             no-lock:
105
106         create eTestcase.
107         assign eTestcase.TestsuiteName = eTestsuite.TestsuiteName
108             eTestcase.ClassName = substitute ("&1.&2.field_&3":U, ldbname ("dic
109             eTestcase.TestcaseName = "CodePage":U
110             eTestcase.ErrorMessage = "CLOB Code Page is not unicode":U .
111         release eTestcase.
112     end .
113
114 end method .

```

## Unit Tests in Jenkins

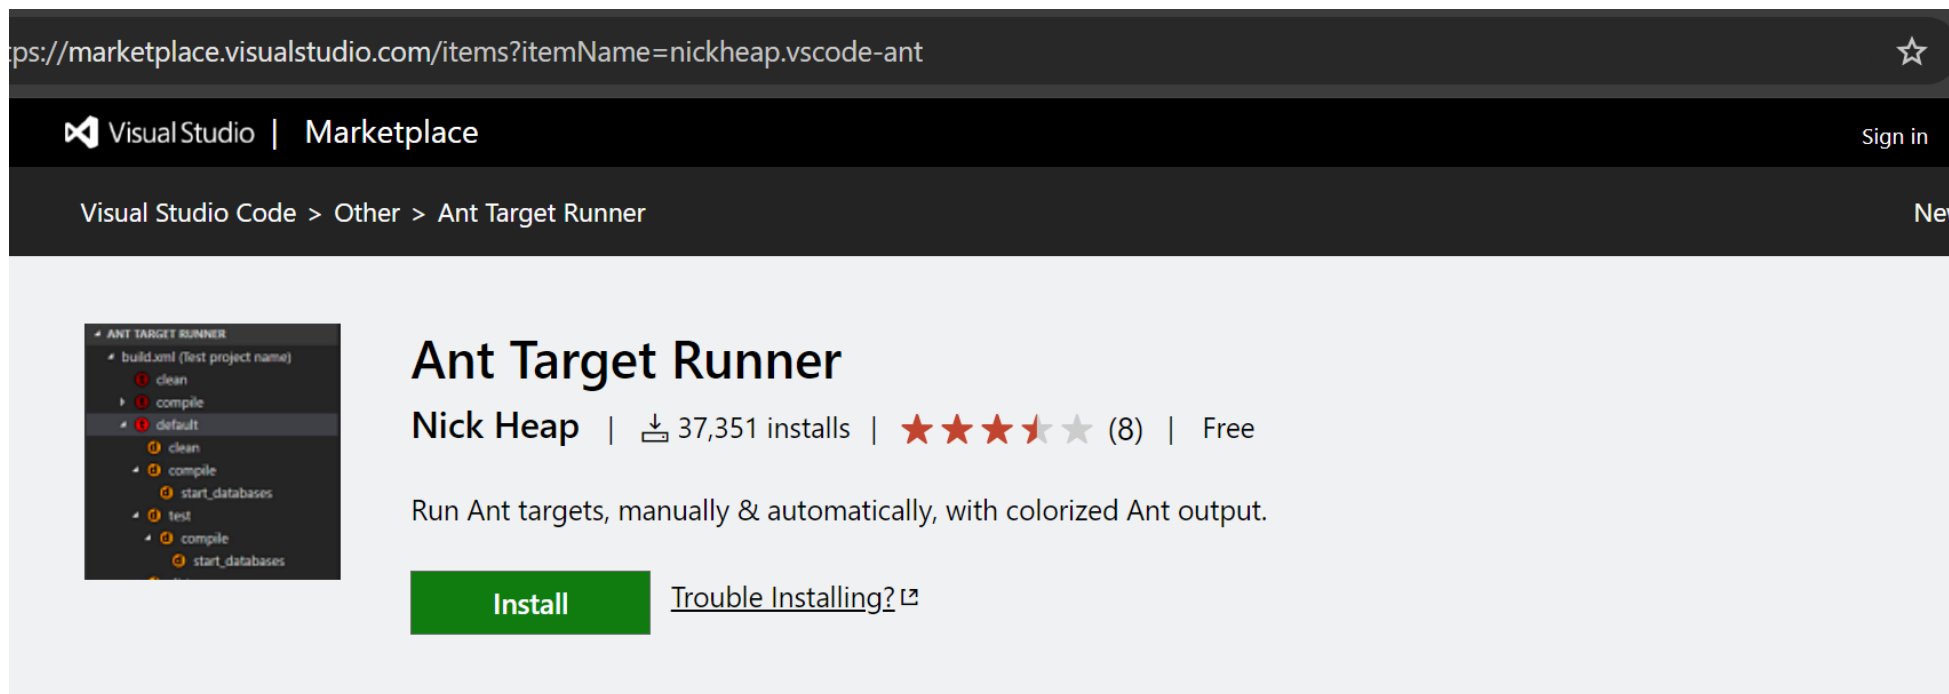

- Jenkins Build Server executes Unit Tests after every commit
- Currently 19.000 Unit Test executed in ~ 12 minutes
- Executed in parallel – with all the joy
- Unit Tests become the typical type of ad-hoc testing by developers (test-first development) – running code for testing from a simple .p feels like a waste of time

## ANT Build Jobs

- Progress Developer Studio: Ant Builder out of the box
- VS Code: Ant Target Runner plugin

# Ant Target Runner

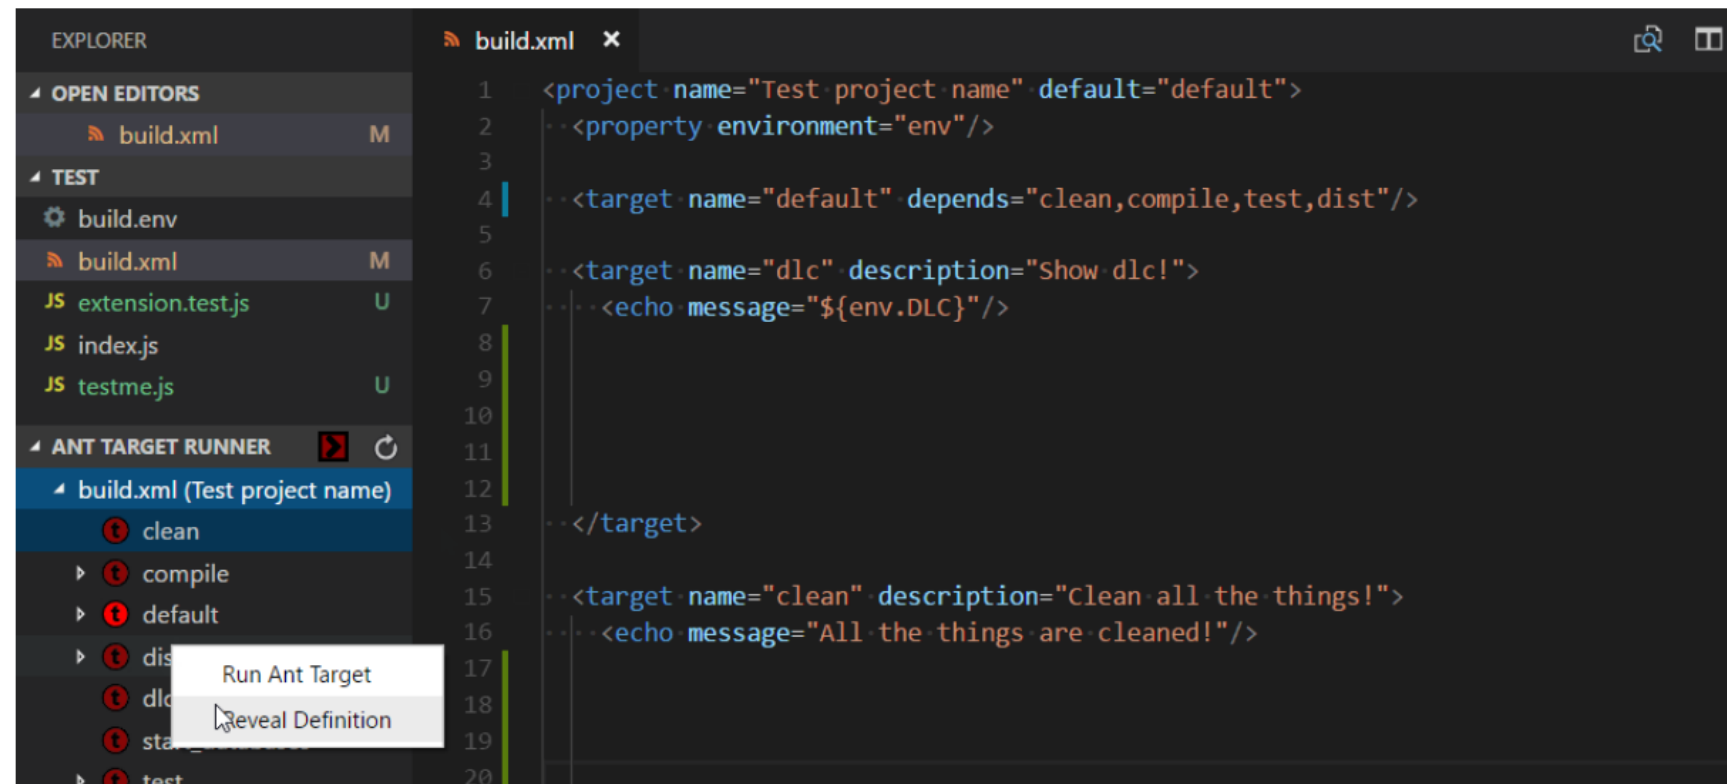

- <https://marketplace.visualstudio.com/items?itemName=nickheap.vscod-e-ant>

The screenshot shows the Visual Studio Marketplace page for the 'Ant Target Runner' extension. The browser address bar displays the URL: `https://marketplace.visualstudio.com/items?itemName=nickheap.vscod-e-ant`. The page header includes the Visual Studio logo and 'Marketplace', with a 'Sign in' link. The breadcrumb navigation shows 'Visual Studio Code > Other > Ant Target Runner'. The main content area features a preview image of the extension's interface, which shows a tree view of Ant targets like 'clean', 'compile', 'default', 'start\_databases', and 'test'. To the right of the preview, the extension is titled 'Ant Target Runner' by 'Nick Heap'. It shows '37,351 installs', a rating of 4.5 stars (8 reviews), and is 'Free'. Below this information is a green 'Install' button and a link for 'Trouble Installing?'. A description below the button reads: 'Run Ant targets, manually & automatically, with colored Ant output.'

# Ant Target Runner

- Actually, not OpenEdge specific
- Developed by an OpenEdge developer, see the sample on the marketplace page

The screenshot shows an IDE interface with two main panels. On the left is the 'EXPLORER' view, and on the right is the 'build.xml' editor.

**EXPLORER View:**

- OPEN EDITORS
  - build.xml (M)
- TEST
  - build.env
  - build.xml (M)
  - extension.test.js (U)
  - index.js
  - testme.js (U)
- ANT TARGET RUNNER
  - build.xml (Test project name)
    - clean
    - compile
    - default
    - dist
    - dlc
    - stage
    - test

A context menu is open over the 'clean' target, showing 'Run Ant Target' and 'Reveal Definition'.

**build.xml Editor:**

```
1 <project name="Test project name" default="default">
2   <property environment="env"/>
3
4   <target name="default" depends="clean,compile,test,dist"/>
5
6   <target name="dlc" description="Show dlc!">
7     <echo message="${env.DLC}"/>
8
9
10
11
12
13 </target>
14
15 <target name="clean" description="Clean all the things!">
16   <echo message="All the things are cleaned!"/>
17
18
19
20
```

# GenAI

# AI

- First touching points in 2023
- PUG Challenge Session by Helmes, consuming SmartComponent Library REST Services from ChatGPT
  - Natural language queries in Sports2000 application
  - Based on Open-API (Swagger) and RESTful API of SmartComponent Library
- Similar initiatives by customers in 2023

## GenAI

“Generative artificial intelligence (generative AI, GenAI, or GAI) is artificial intelligence capable of generating text, images, videos, or other data using generative models, often in response to prompts. Generative AI models learn the patterns and structure of their input training data and then generate new data that has similar characteristics.”

“Generative AI has uses across a wide range of industries, including software development, healthcare, finance, entertainment, customer service, sales and marketing, art, writing, fashion, and product design.”

[https://en.wikipedia.org/wiki/Generative\\_artificial\\_intelligence](https://en.wikipedia.org/wiki/Generative_artificial_intelligence)

# GenAI in Software development

- Supporting of developers while writing code
- More intelligent proposals while coding
- Chat: „write me a method that solves XYZ “, „write me a unit test for this method “), Boiler Plate Code – the new kind of wizards
- Refactoring of Code
- Explanation of Code, proposal for comments
- Understanding of the context
  - Programming languages
  - Frameworks
  - Application model / Terms, e.g. Database schema

# Codeium

- AI Assistant for Software developer
- 70 programming language – no ABL support out of the box 😞
- 40 IDE's (including VS Code and Eclipse), works in PDSOE 12.8
- Used at Consultingwerk since end of march
- Resulting proposals improved day by day

codeium
